

Renal Ultrasound

I am going to have an ultrasound of my kidneys.

An ultrasound is a special picture of the inside of my body.

For my ultrasound, my family and I may walk to a room like this, or someone may bring an ultrasound machine to my room.

It may be a little dark in this room, but that's OK, this helps my picture show up better.

lie down

I will lay down on the bed for my picture.

The person taking my picture will use a camera that looks this.

Some people call this camera a “wand”.

This wand is soft on the end.

The person taking my picture will put some clear gel that looks just like this on the end of the wand.

My big job is to stay very still for my picture but I can still play on my iPad, watch TV, or listen to my favorite song.

The person taking my picture will then place the wand on my belly.
This will not hurt me.

The gel on the wand may feel warm or cold.

I can still play on my iPad, watch TV, or listen to my favorite song while I lay on my stomach.

The person taking my picture may also ask me to lay on my stomach like this to get more pictures.
This is ok and will not hurt.

After my ultrasound, the gel will be wiped off using a tissue or rag.

All done

I am all done.
