

Gabby

**AGE 12, HEART TRANSPLANT PATIENT
2020-2021 CMNH CHAMPION FOR
CHILDREN'S OF ALABAMA**

Children's
of Alabama®

Children's
Miracle Network
Hospitals

Just a few months after she was born, Gabby was diagnosed with pediatric myocarditis, an inflammation of the heart muscle. Her condition was managed until 2015 when she had to be placed on the transplant list. August 2021 will mark six years since Gabby received her new heart at Children's of Alabama. Since that time, she hasn't slowed down and lives life to the fullest. Whether it's trying a new sport, making straight As, or helping raise awareness for her children's hospital, Gabby is always ready to give it her all.

Logan

AGE 4, SPINA BIFIDA PATIENT

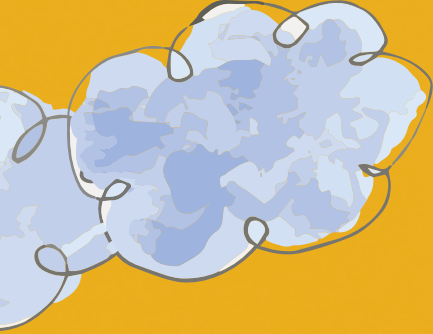

Children's
of Alabama®

Children's
Miracle Network
Hospitals

Diagnosed with severe spina bifida in utero, Logan was transferred to Children's of Alabama the day after her birth for treatment and surgery. Monitored in the Neonatal Intensive Care Unit for 30 days, Logan was transferred to a step-down unit and later discharged home, where she has thrived. Logan continues to visit Children's Spina Bifida Clinic twice a year and, thanks to continued physical therapy, has learned to walk in custom orthotics. Because of the care and treatment she receives at Children's, Logan can enjoy painting, soccer, and playing with her peers on the playground. She has a bright future ahead and dreams of becoming a butterfly when she grows up.

Colton

AGE 11, KIDNEY TRANSPLANT PATIENT

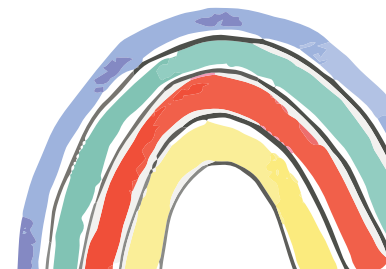

Children's
of Alabama®

Children's
Miracle Network
Hospitals

Colton was born in 2010 with congenital nephrotic syndrome which damaged his kidneys. By age 2, he had 15 surgeries and required 19 different medications, peritoneal dialysis and, ultimately, a kidney transplant from his dad. Today, thanks to the treatment he received at Children's, Colton can focus on his favorite subject, history, cheering on the Crimson Tide, and playing baseball.

Lilianna

AGE 11, ACUTE MYELOID LEUKEMIA PATIENT

Children's
of Alabama®

Children's
Miracle Network
Hospitals

When acute myeloid leukemia hit Lilianna Thompson in 2011, it hit hard. Initial treatment failed. But following several courses of chemotherapy, two blood cord transplants, radiation and a bone marrow transplant, Lilianna is a walking, talking, giggling miracle.

Rick

AGE 13, EPILEPSY PATIENT

Children's
of Alabama®

Children's
Miracle Network
Hospitals

Rick underwent thermal laser ablation at Children's of Alabama to treat his epilepsy. After a successful six-hour surgery with his favorite stuffed animal by his side, Rick was discharged home the next day and his seizures have ceased. "We couldn't be more appreciative of everyone at Children's," said Rick's mother, Jamie. "They went above and beyond."

Steven

AGE 8 MONTHS, TRANSPOSITION OF THE GREAT ARTERIES PATIENT

Children's
of Alabama®

Children's
Miracle Network
Hospitals

Steven was born with a serious but rare congenital heart defect and had surgery at Children's of Alabama when he was just 6 days old. Today, Steven is growing and thriving, but will require another surgery when he's a little older. "By looking at him, you'd never know he's ever had a heart problem, and we know that so much of that is because of Children's," said Steven's mother, Cyntia.
